

Project Design Phase -1

Solution Architecture

Date	07-10-2022
Team ID	PTN2022TMID41218
Project Name	NEWS TRACKER APPLICATION
Maximum Marks	4 Marks

Solution Architecture

Solution Architecture is a complex process – with many sub processes – that bridges the gap between business problems, and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behaviour, and other aspects of the software the project stack holders.
- Define features, development phases and solution requirements.
- Provide specifications according to which the solution is defined, managed and delivered.
